

# Syringe Filters

## High Throughput - NDX™

Using MicroSolv NDX™ Nylon multi-depth syringe filters allows you to filter viscous and highly particulated samples with less back pressure and therefore less hand force/stress. Made with 3 layers of varying pore size microfiber glass and one layer of low extractable nylon these filters are excellent for any hard to filter sample. Often the first choice in dissolution testing, environmental and other labs using many different complex mixtures.

These certified filters are simple and ready to use. No assembly is needed to quickly and reliably filter out particulate matter or agglomerations that could foul your CE, HPLC or LC/MS system.

- 0.45µm NYLON WITH MULTIPLE PREFILTERS
- 4 LAYERS OF FILTRATION IN ONE DISPOSABLE DEVICE
- FILTER WITH MUCH LESS HAND FORCE
- INCREASE THROUGHPUT OF VISCOUS OR “DIRTY” SAMPLES WITHOUT CHANGING FILTERS

### Specifications:

Filtration Area:	4.5cm <sup>2</sup>
Pressure Rating:	100 psi
Housing:	Polypropylene
Hold Up Volume:	100µl

### Cat. No.

### Description
