Catalog Number

68024-P21-2503M

Prep HPLC Column, RP Phenyl, Wide Pore, 10um, 300A. 21.2mm ID x 250mm Length. Cogent Brand. 1 EA.

Additional Info

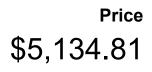

The Cogent RP PhenyI[™] Wide Pore, Stationary Phase has been a premium value, and used by HPLC laboratories and pilot plants for many years. It is double end capped (fully), with traditional bonding of a 3 carbon silane with a terminal Phenyl Ring to the highest purity silica available.

The 10 μ m particle with 300A pore size works well with higher flow rates and produces lower back pressures than smaller particles and pore sizes.

The large diameter and length of this column provides high loading capacity which is great for purification of larger compounds such as isomers (positional), Tocopherols, Flavonoids, Polynuclear Aromatics, Nitro-Aromatic Compounds, many Active Pharmaceutical Ingredients (APIs), Natural Products and Related Compounds that have Phenyl rings, making it ideal for Preparative HPLC.
